

Analytical Perspectives on Events and Outcomes.

"He who have a why, can manage almost any how"

Childhood

My childhood was a creative and reflective time. I was naturally curious, always imagining different futures, creating stories in my head, and observing people quietly. I wasn't just living moments — I was thinking about them. There was a certain innocence mixed with depth in how I saw the world. Even when I didn't fully understand things, I felt them intensely. That early creativity built my inner voice. School life slowly gave structure to that imagination. It taught me discipline, responsibility, and consistency. I began to understand competition, ambition, and the value of academic success. I made friendships, learned teamwork, and started taking my studies seriously — not just for grades, but for self-respect and a better future. School shaped my mindset and gave direction to the creative child I once was.

College Life

I studied at Dr. Mahbubur Rahman Molla College in Dhaka. College was where my mindset truly evolved. From the beginning, I built a productive and thoughtful friend circle.

We didn't just waste time — we talked about skills, critical thinking, rationality, and self-improvement. Those discussions changed me. During this time, I consciously prepared myself for university — both mentally and academically. I wanted to become a knowledge-based and research-oriented student. College was not just a phase; it was my foundation. I trained myself to think logically, manage my time better, and stay consistent. I knew I was preparing for something bigger.

University Life

After performing well in my HSC, I was fortunate enough to get admitted into the Economics Department at the University of Chittagong.

Aspirations

- *Complete Bachelor's in Economics Strongly*
- *Build Technical Skills Alongside my Degree. Strengthen Mathematics for Data analysis*
- *Understand Career Path Options: Data Analyst → Data Scientist*
- *Prepare for Higher Studies Abroad*

That moment felt like a reward for all the preparation I had done. University life feels more independent and intellectually demanding. I met amazing people here — especially friends like Russel, Adnan, and Ismail. They are rational, thoughtful, and intellectually sharp. Our conversations challenge my perspective and push me to grow. The faculty members and professors have also been very supportive. Their guidance motivates me to aim higher and think deeper. Now, I am not just studying for exams — I am trying to shape myself into a research-oriented, knowledge-driven individual.
